

Project Name

“ Robotics Products Trading (E-Trade Area) ”

Group Members

Ufuk GÜRBÜZ (150113058) – **Mustafa YEMURAL** (150113053)

Scope of The Project

The project is about robotics activities and products. We decided to work in e-trade area and we chose robotics area for working. We will make a e-trade website about robotics products.

Description

We will work onto e-trade area about robotics products. We live in technology age. The world is developing with artificial intelligence, industrial activities and robotics breakthroughs. As a result of these, the new generation cares these areas. So, we thought about these subjects and decided to build a website about robotics products. The project will contain detailed table structures, multiple relationships and built-in tasks for database part(“**Ms Sql**”). We will make website interface part using “**Php**”, “**Html**”, “**Css**”, “**JavaScript**”, “**JQuery**”, “**Bootstrap**”, “**Photoshop**” Technologies (and many assistant tools).

Project Steps

- 1) We arranged a meeting with a “e-trade company”. We will meet with them for obtaining information about “database (table structures, multiple relationships and built-in tasks)” and “website(Php,Html,Css,Js,JQuery,Bootstrap)” parts. So, we can make a more beautiful website.
- 2) We will create the data tables according to king of products. Then, we will define between tables. After all, we will create many built-in tasks (predefined queries) for doing easier than table operations.
- 3) We finished database part. So, we can start website part. Firstly, we will decide design of website. Then, we will design front-end part of website using “Html”, “Css”, “Js”, “JQuery”, “Bootstrap”. Finally, we will connect website to database using “Php”. So, we can take product information from database and we can show these information onto website.
